25+ yrs

production web software across
product, media, operations and
tooling

30K+ / day

aerospace orchestration jobs for
Airbus smart-cabinet operations

400M / day

requests handled across the
managed media network

3B+ / month

ads distributed through custom ad-
serving infrastructure

100 / 99

Lighthouse desktop / mobile score on
AI-directed portfolio

PROFILE

Frontend-led, not frontend-limited. I build production web products where browser UX, backend APIs, databases, caching, observability, offline workflows, and delivery automation have to work together. AI agents provide implementation throughput; architecture, review, tests, docs sync, and quality gates stay human-owned.

PORTFOLIO PROOF

2026 - PRESENT

i-technology.net desktop portfolio

AI-directed web app turning a resume into a desktop simulator: human-owned product direction, architecture, review, tests, docs sync, and quality gates, with agent-assisted implementation across mini apps, mobile shell, prerendered SEO, optimized assets, and state.

OPERATING MODE

- Clarify users, failure modes, data flows, and acceptance evidence before implementation.
- Modernize legacy systems through typing, logging, repeatable checks, and production-friendly steps.
- Use AI-directed workflows for specs, implementation, review, docs sync, tests, and quality gates.

CURRENT VALUE

Best fit: autonomous product teams, startups, scale-ups, SaaS companies, software publishers, or expert operational teams that need a senior builder who can own delivery from product problem to production without losing engineering control.

SELECTED EXPERIENCE

Mar 2022
Present

Consultant - Product, Full-Stack & Operational Software

Maser Engineering - France, hybrid

- Delivered production software for Airbus, Hutchinson, SBM, Terega, CRIT, Nexess, Maser Academy, and renewable-energy teams.
- Built data orchestration, offline field apps, planning back offices, certification workflows, inventory systems, and observability tooling.
- Introduced AI-directed delivery workflows, documentation sync, quality gates, and repeatable validation practices.

2019
Present

Product / Technology / Automation Consultant

Independent - Toulouse, France

- Advises entrepreneurs, startups, SMEs, and product/technical teams on strategy, workflows, technical direction, automation, optimization, ROI, risk, and delivery choices.

2014
2017

Web Architect / Delivery Modernization

Infomil, dao & Co, Prestalia - Toulouse, France

- Improved source-control architecture, cloud migration, deployment pipelines, bug tracking, and knowledge sharing.

2003
2013

Senior Full-Stack Developer / Tech Lead

123 Multimedia / Index Multimedia - Toulouse, France

- Led and evolved high-traffic community, real-time chat, ad-tech, localization, and error-tracking systems for major French media brands.

SELECTED IMPACT PROJECTS

High-scale real-time web and ad-serving systems

Lead developer and technical owner for white-label chat and ad-serving products covering frontend architecture, backend APIs, caching, moderation, performance, campaign routing, targeting, and branded portals.

600M views/month3B+ ads/month
~125K req/s chat-cluster peaks

TMIP Scheduler - Airbus data orchestration

Central service synchronizing Nexess smart cabinets, Google Workspace, Skywise datasets, and management tooling while modernizing legacy Python into typed, observable infrastructure.

30K+ jobs/day16 plants~1,000 users

TMIP Logger - QoS & KPI observability

Structured logging layer turning raw events into SQLite inspection, Vue operations views, Skywise feeds, and automated alerts for plant and job health.

10x error reduction5x faster fixes~300 jobs

Operational health monitoring - production signals

Health and alerting layer for industrial jobs: error spikes, SSL expiry, daily summaries, Skywise feeds, Quiver VM metrics, and plant/job-level diagnosis.

16 plantsSkywise + Quiverautomated alerts

HealthMonitoring - error-tracking back office

Aggregated SQL, IIS, .NET, application, and client-side errors into drill-down views by machine, exception, message, stack trace, request context, and browser metadata.

days to minutes5x fewer errorsSQL/IIS/.NET/client

Offline field and compliance platforms

Quasar/Vue field apps, Symfony back offices, SCORM onboarding, certification expiry, gate checks, queued sync, and PDF/CSV outputs for industrial teams.
