25+ yrs

production software across web, industrial, media and operations

30K+ / day

industrial orchestration jobs for Airbus smart-cabinet operations

400M / day

requests handled by high-scale white-label chat platforms

3B+ / month

ads distributed through custom ad-serving infrastructure

100 / 99

Lighthouse desktop / mobile score on AI-built portfolio

PROFILE

I turn messy operations into reliable software.

Current focus: industrial data flows, traceability, field work, offline sync, dashboards, alerting, and engineering workflows where AI agents are used as controlled delivery infrastructure, not just autocomplete.

CORE STACK

Python 3.12

FastAPI

C#

.NET

Vue 3

TypeScript

Symfony

Quasar

MariaDB

SQLite

Airtable

Skywise

Google Workspace

Digital Transformation

PORTFOLIO PROOF

2026 - PRESENT

[i-technology.net desktop portfolio](#)

100% AI-built web app turning a resume into a desktop simulator: window manager, mini apps, bilingual content, mobile shell, Three.js game, prerendered SEO, optimized assets, and persistent state.

OPERATING MODE

Outside-in delivery: clarify users, failure modes, data flows, and acceptance evidence before polishing UI.

Modernize legacy systems through typing, logging, repeatable checks, and production-friendly migration steps.

Use agent workflows for research, specs, reviews, implementation, docs sync, and quality gates.

CURRENT VALUE

Best fit: industrial, aerospace, energy, compliance, training, or operational teams that need a senior full-stack builder who can connect systems, reduce manual work, make data traceable, and ship usable internal tools without losing engineering control.

SELECTED EXPERIENCE

Mar 2022

Present

Consultant - Industrial Software & Operations Platforms

Maser Engineering - France, hybrid

Delivered production software for Airbus, Hutchinson, SBM, Terega, CRIT, Nexess, Maser Academy, and renewable-energy teams.

Built data orchestration, offline field apps, planning back offices, certification workflows, inventory systems, and observability tooling.

Introduced AI-assisted engineering workflows, documentation sync, quality gates, and repeatable delivery practices.

2019

Present

Digital & Technological Consultant

Independent - Greater Toulouse Area

Advises entrepreneurs, startups, and SMEs on product strategy, automation, technical risk, ROI, and full-stack delivery.

2003

2013

Senior Full-Stack Developer / Tech Lead

123 Multimedia / Index Multimedia

Built and evolved high-traffic community, chat, ad-tech, localization, and error-tracking systems for major French media brands.

SELECTED IMPACT PROJECTS

TMIP Scheduler - Airbus data orchestration

Central service synchronizing Nexess smart cabinets, Google Workspace, Skywise datasets, and management tooling while modernizing legacy Python into typed, observable infrastructure.

30K+ jobs/day

16 plants

~1,000 users

TMIP Logger - QoS & KPI observability

Structured logging layer turning raw events into SQLite inspection, Vue operations views, Skywise feeds, and automated alerts for plant and job health.

10x error reduction

5x faster fixes

~300 jobs

Offline field and compliance platforms

Quasar/Vue field apps, Symfony back offices, SCORM onboarding, certification expiry, gate checks, queued sync, and PDF/CSV outputs for industrial teams.

100s turbines

117 companies

10,202 steps

High-scale web and AI workflow systems

White-label chat/ad infrastructure for major media brands, plus portable agent workflows for quality, governance, documentation sync, and validation.

400M req/day

3B+ ads/month

11 AI skills
